

# Overcrowded Orbits: Understanding the Impacts on Ground-Based Astronomy

Andrew Williams

External Relations Officer, Office of the Director General  
European Southern Observatory

# Contents

1. What are the impacts of satellite megaconstellations on astronomy?
2. What is the astronomy community is doing about it?
3. How will the problem be solved in the long term?

# European Southern Observatory

- Intergovernmental organization for astronomy
  - Founded in 1962 by five countries with the goal to build a large observatory in the southern hemisphere
- Mission
  - Develop and operate world-class observatories for astronomical research
  - Foster cooperation in astronomy
- ESO today:
  - All ESO Observatories are in Chile, headquarters in Garching
  - 16 member states, 700+ employees

# Why should we care?

## Science & Environment

### Is there life floating in the clouds of Venus?

By Jonathan Amos  
BBC Science Correspondent

14 September 2020

### Biggest asteroid to pass close (and undetected) this year

Posted by Eddie Irlizarry in SPACE | June 11, 2020

Asteroid 2020 LD passed within the moon's distance on June 5, but wasn't discovered until June 7. It's the 45th known and the largest asteroid to sweep within a lunar-distance of Earth so far in 2020.

Sharing is caring!

### ESO Observations Show First Interstellar Asteroid is Like Nothing Seen Before

VLT reveals dark, reddish and highly-elongated object

20 November 2017

For the first time ever astronomers have studied an asteroid that has entered the Solar System from interstellar

# Satellite Megaconstellations

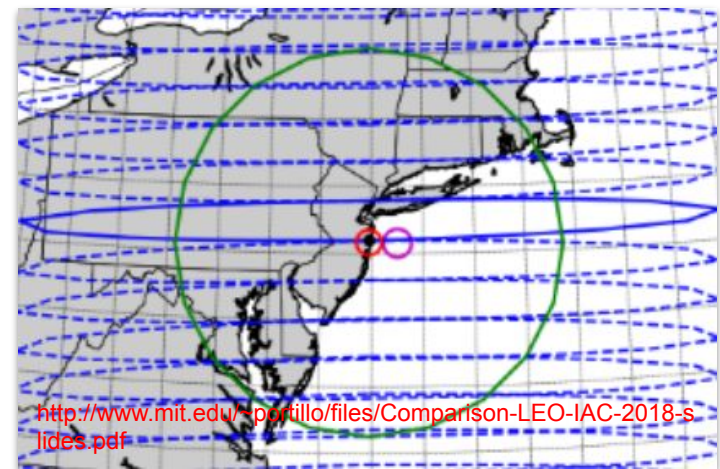

**Satellite Constellation:** a number of similar satellites, of a similar type and function, designed to be in similar, complementary, orbits for a shared purpose, under shared control [1].

- Navigation and geodesy (e.g. GPS, Galileo and GLONASS),
- Satellite telephony (e.g. Iridium)
- Earth Observation (e.g. DMC, PlanetLabs)
- Global satellite internet,
- Internet of Things to connect machines and systems together directly.

1. Wood, Lloyd, *Satellite constellation networks*, Internetworking and Computing over Satellite Networks. Springer, Boston, MA, 2003, p.13-34.

Important factor = signal latency - the time taken to signals to move from a ground station providing internet to the satellite and then on to a user.

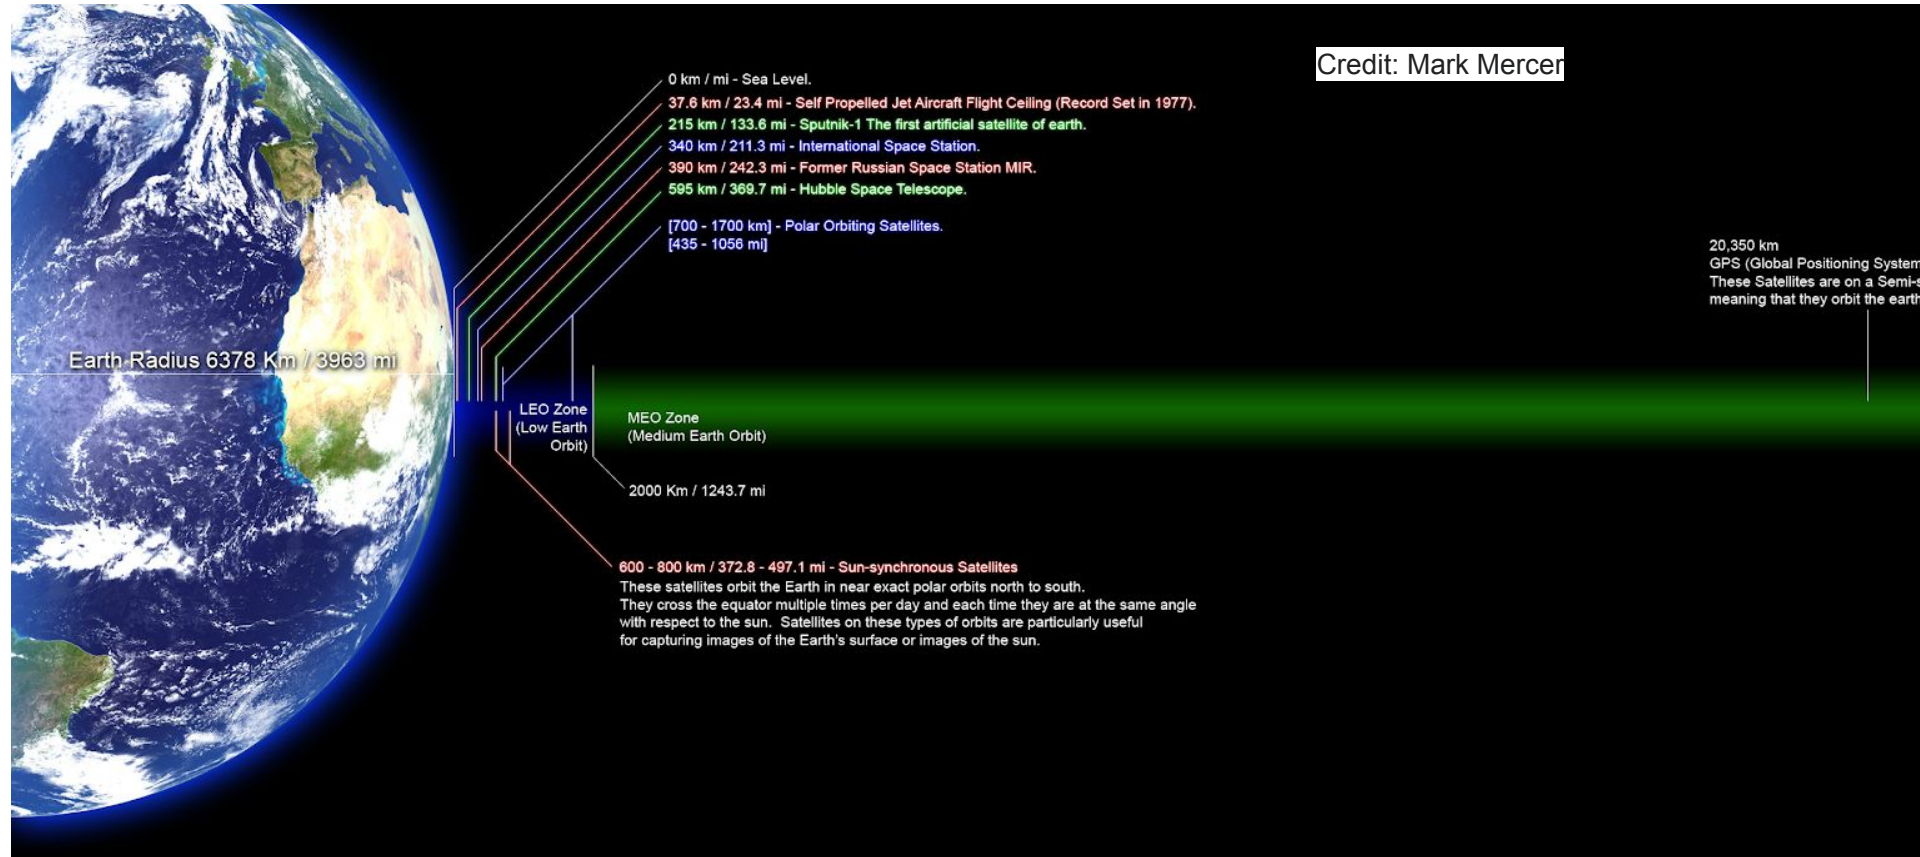

- Coverage on Earth
- Altitude of satellite
- Numbers of satellite units
- Power/ frequency / bandwidth etc.

# Low Earth Orbit

Scale: 1 Pixel = 100 Km / 62.1 mi

20000 Km / 12437.4 mi

MEO Zone  
(Medium Earth Orbit)

LEO Zone  
(Low Earth Orbit)

HEO Zone  
(High Earth Orbit)

# Growing Numbers of Satellites

**107,000  
PLANNED  
SATELLITES  
BY 2029**

**Many problems other than impact  
on astronomy:  
Space Traffic Management, Space  
Debris, Long Term  
Sustainability....**

Muelhaupt, Theodore J., et al. "Space traffic management in the new space era." *Journal of Space Safety Engineering* 6.2 (2019): 80-87.

# Simulating a constellation

- How many satellites over the horizon at any given place on Earth?
- How many are illuminated by the sun?
- How bright are they?
- How many cross a telescope field of view?

| Altitude [km] | Inclination [deg] | Planes | Satellites |
|---------------|-------------------|--------|------------|
| 328           | 30                | 84     | 7178       |
| 334           | 40                | 84     | 7178       |
| 345           | 53                | 84     | 7178       |
| 373           | 75                | 20     | 1998       |
| 499           | 53                | 40     | 4000       |
| 604           | 148               | 12     | 144        |
| 614           | 116               | 18     | 324        |
| 360           | 97                | 40     | 2000       |

**Starlink Generation 2 (from May 2020 filing, JMcD Model III).**

# Simulating a constellation

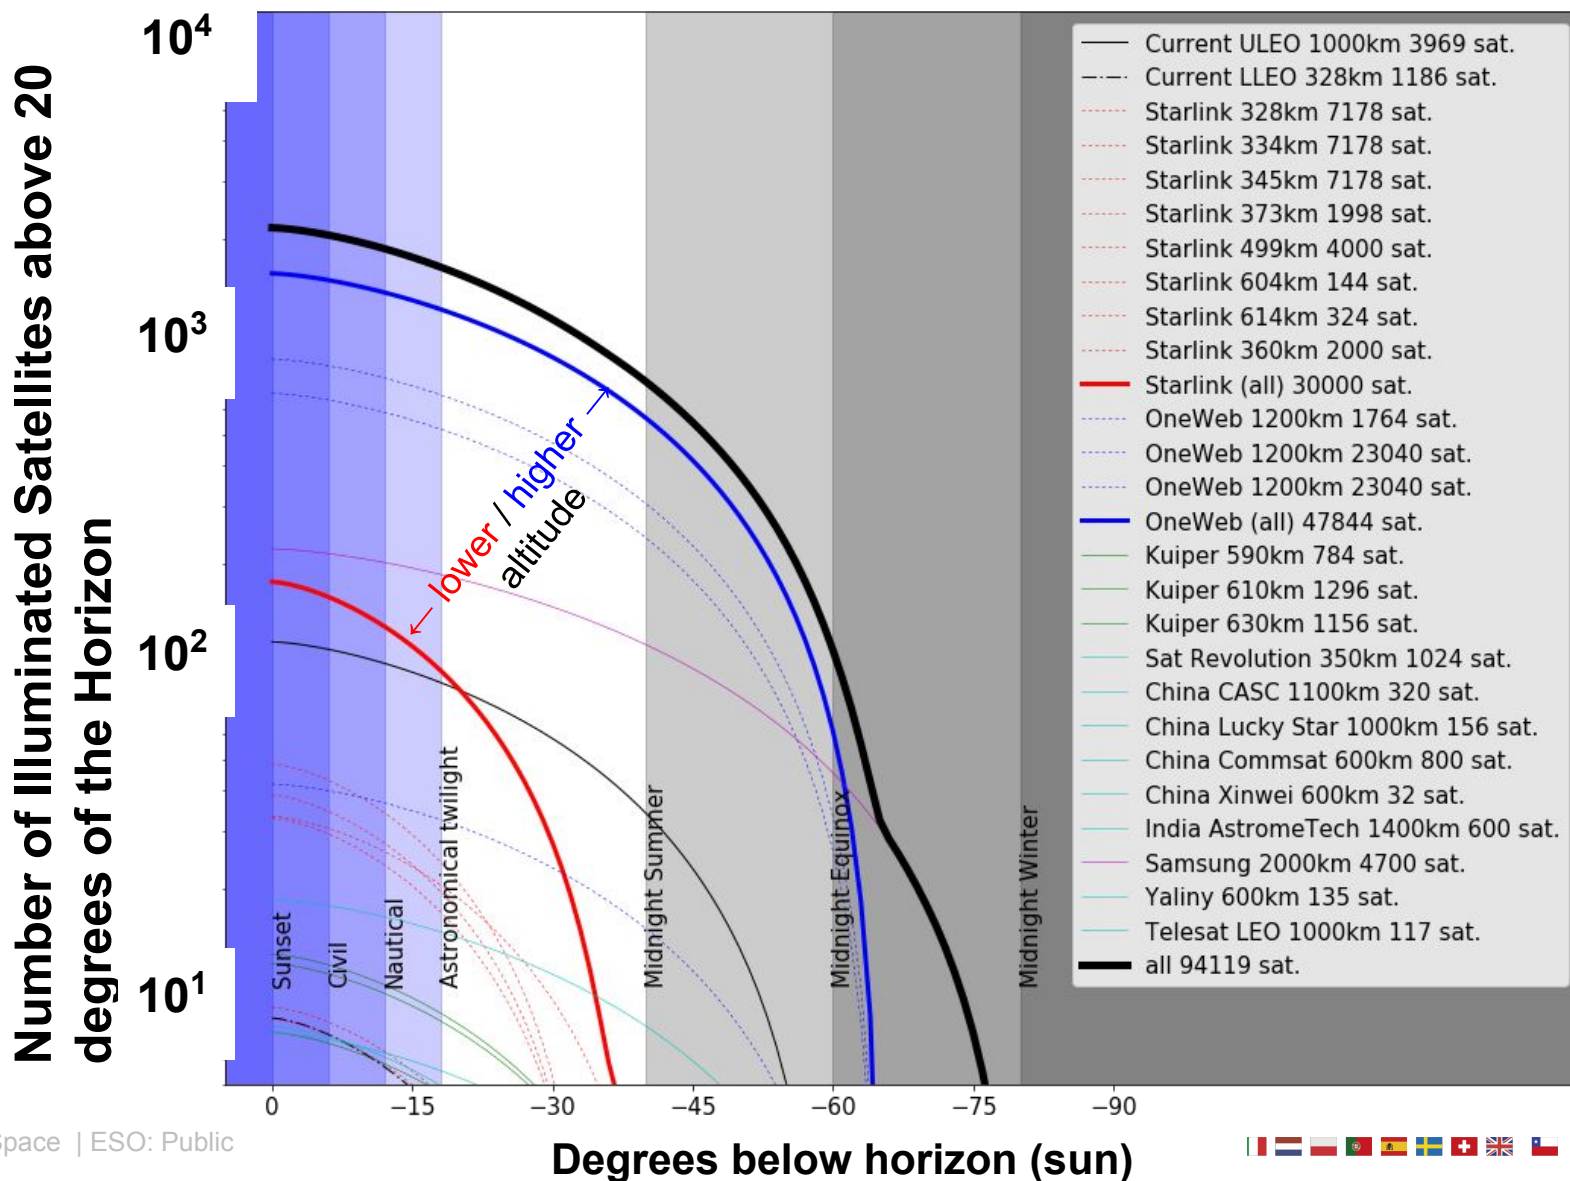

## PARANAL WINTER

Observatory latitude:  $-25.0^\circ$   
 Constellation: SL Gen2 + OW Ph2  
 Sun: HA=  $51.0^\circ$   $\delta= 23.0^\circ$   
 Sun elevation=  $21.1^\circ$   
 Local Time: 15:24:00

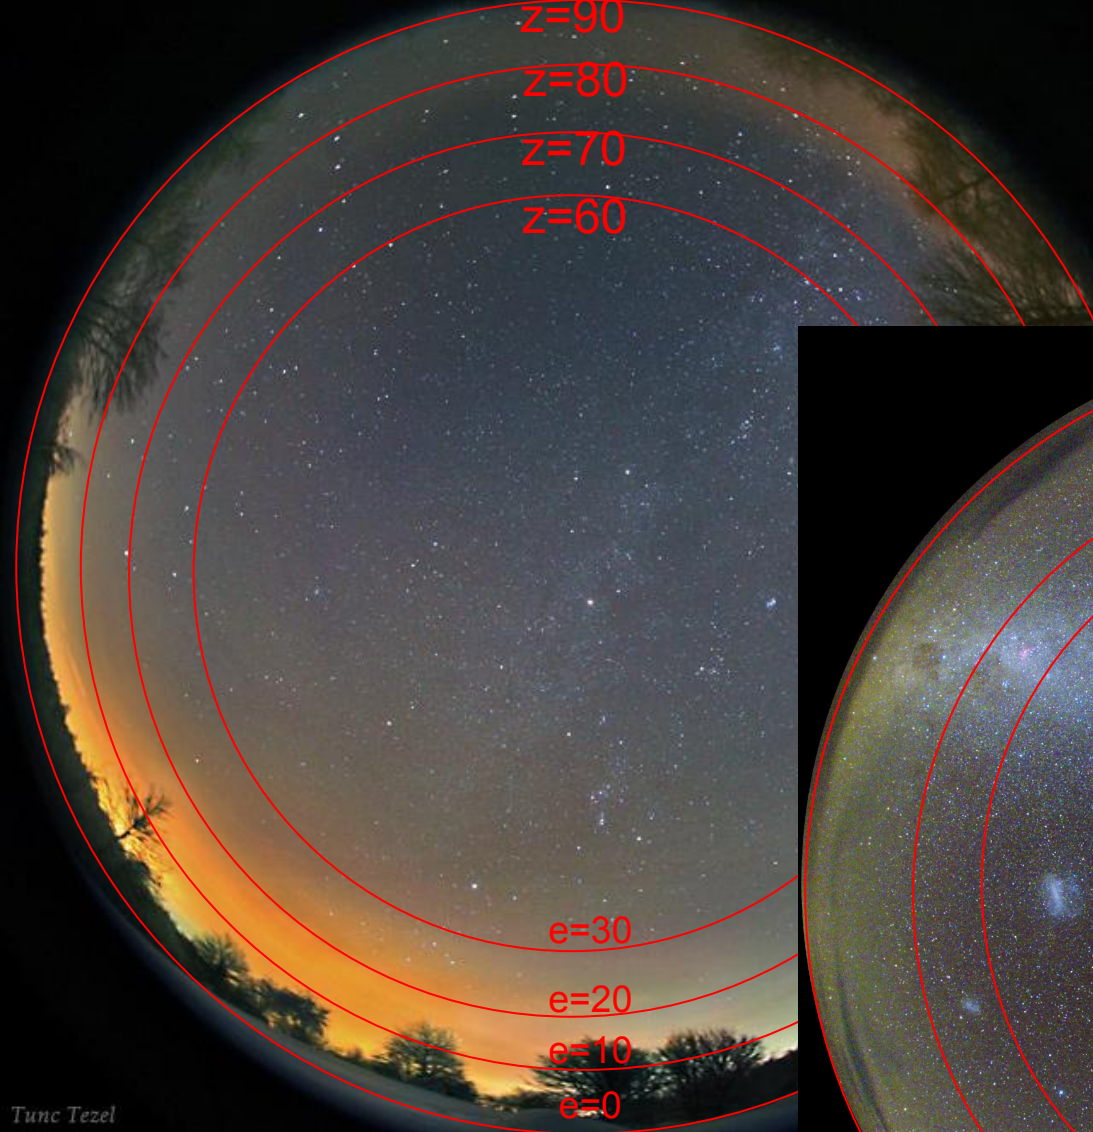

Credit: Oli Hainaut

# Current satellites & Future constellations

**Pro:** observations above

- $30^\circ$  (Paranal: 96%)
- $20^\circ$  (Surveys)

**Amateurs:** lowest  $10^\circ$  almost always lost

# Astronomical Community Steps

- Initial studies, simulations, limited observations campaigns
- Understanding of mitigations
  - ▶ Scheduling tools
  - ▶ Science strategy
  - ▶ Shuttering, post-image analysis / trail removal
  - ▶ Darken satellites
  - ▶ Keep satellites low
  - ▶ Don't launch them

*No combination of mitigations will avoid all impacts!*

# Astronomical Community Steps

- NSF/AAS SATCON1 Workshop
- SATCON2 - Policy and Regulation
- UN/IAU Workshop on Dark Skies
- Many national working groups
- *Collaborative Work with Space Industry!*

## Dark and Quiet Skies for Science and Society

On line  
5 - 9, October, 2020

# DARK & QUIET SKIES

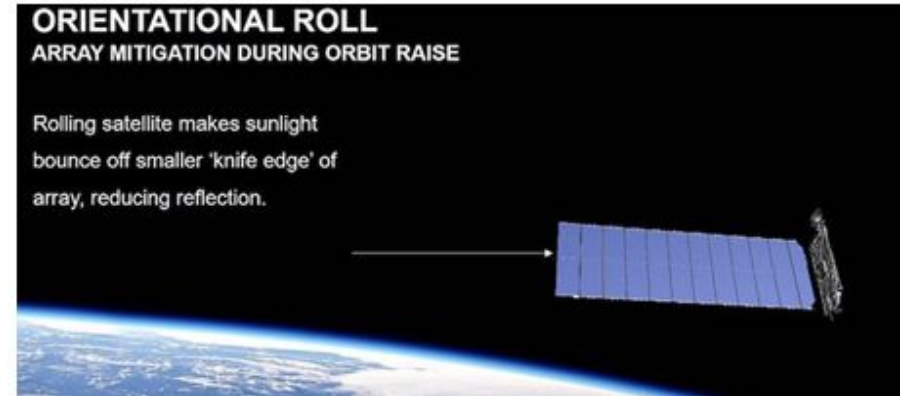

## 1. DARKSAT: black coating

## 2. VisorSat: Sun Shield

### 3. Attitude Control during orbit raise

***"I'm confident that we will not cause any impact whatsoever in astronomical discoveries, zero. That's my prediction. We'll take corrective action if it's above zero."*** – Elon Musk, CEO, SpaceX, quoted 3/10/20  
BusinessInsider.com

# But...

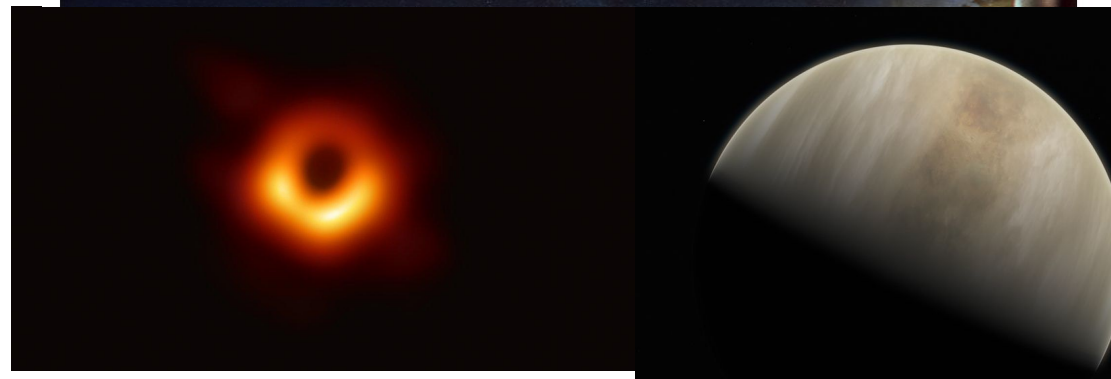

Broader questions:

- Who has the “right” to the night sky?
- Who decides?
- How to balance access to sky for science with access for commercial or other purposes?

**This Russian startup wants to put huge ads in space. Not everyone is on board with the idea.**

Swarms of tiny, light-reflecting "cubesats" would come together to form luminous words or logos.

# Work for future space professionals...

- Regulation
  - ▶ Space traffic, debris, space data
  - ▶ Radio and optical interference
- Continue interaction with industry
  - ▶ Regulation will take time
- Space industry corporate social responsibility
- Designing astronomy facilities in the satellite constellation era
- Applicability of Outer Space Treaty
  - ▶ Need for new guidelines?!

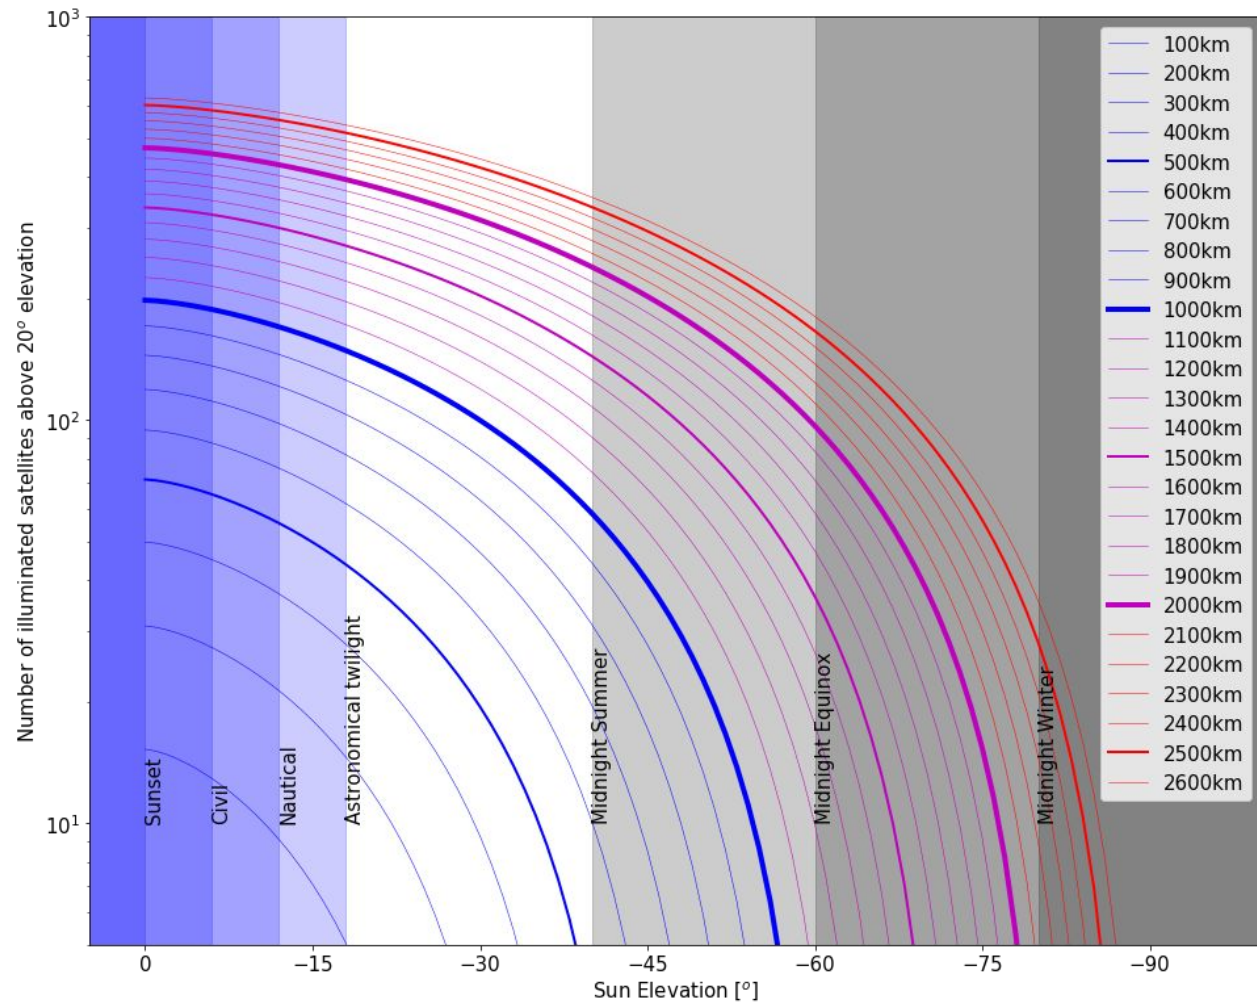

## High-altitude satellites are a problem

Credit

Oli Hainaut

Fake constellations:

- 10 000 sat. each
- Altitude 100 → 2600km

# Effect on the observations

...for some typical observations...

no observations ←|

## Starlink2 + OneWeb2
